## Nestlé Nigeria Abaji Factory's Commitment to the Alliance for Water

### Stewardship (AWS) Standard

At Nestlé, we recognize that the long-term success of our company is built upon effective water stewardship in the watersheds where our raw materials are sourced, where our factories are located and where our suppliers and consumers live.

We understand that effective water stewardship will require a collective approach where government policies protect the human right to water and enables multi-stakeholder action to ensure access to safe water for all in a functioning ecosystem.

We are therefore committed to facilitating effective water stewardships in the geographies where we source from and operate within, focusing on measures that are cost effective and relevant within the watershed.

In support of Abaji site's effort towards implementing the AWS standard, I commit to the following:

- Support the site's pursuit of responsible water stewardship and its outcomes.
- Respect the rights of workers onsite to have access to safe water, adequate sanitation and hygiene.
- Support the site in engaging stakeholders in an open and transparent manner.
- Comply with all relevant national, legal and regulatory requirements
- Support public sector agencies in their effort to encourage water related policies and plans
- Allocate resources needed to effectively implements the AWS standard; and
- Disclose progress on our water stewardship programs.

AYEOKERE Ayodele

Factory Manager
