Nestlé Nigeria PLC Agbara Factory's Commitment to the Alliance for Water Stewardship (AWS) standard.

At Nestlé, we recognize that the long-term success of our company is built upon effective water stewardship in the watersheds where our raw materials are sourced, where our factories are located and where our suppliers and consumers live.

We understand that effective water stewardship will require a collective approach where government policies protect the human right to water and enables multi-stakeholder action to ensure access to safe water for all in a functioning ecosystem.

We are therefore committed to facilitating effective water stewardships in the geographies where we source from and operate within, focusing on measures that are cost effective and relevant within the watershed.

In support of Agbara site's effort towards implementing the AWS standard, I commit to the following:

- That the site will implement and disclose progress on water stewardship program(s) to achieve improvements in AWS water stewardship outcomes.
- That site implementation will be aligned to and in support of existing catchment sustainability plans.
- That the site's stakeholders will be engaged in an open and transparent way.
- That the site will allocate resources to implement the AWS Standard.

FALL Talla
Factory Manager
